

Instrument: Quarterly Operating Session Agenda + Hybrid Org Today

Chapter 10 – The Rhythm

One sprint is an experiment. A rhythm of sprints is a transformation. This instrument gives you the meeting agenda that locks that rhythm in place and the living document that tracks where your hybrid org actually stands — not where you planned for it to be.

Part 1: The Quarterly Operating Session

Four steps, in order. This meeting happens once per quarter, after the sprint's Compound phase and before the next sprint's Signal.

Step 1: Review the Previous Sprint

- Read the sprint outcome statement (from Deliver).
- Review the retrospective findings (from Compound).
- Answer: Did the sprint deliver against Signal's quantified cost? By how much?
- Answer: Is the workflow permanent or does it need another sprint?

Step 2: Update the Signal Backlog

- Pull the re-ranked backlog (from Compound).
- Review each candidate: still relevant? Cost changed? New information?
- Add any new constraints that emerged during the quarter.
- Remove any that were resolved as side effects.

Step 3: Commit the Next Sprint

- Pick the top constraint from the updated backlog.
- Name the Human Orchestrator.
- Confirm the team has the resources (people, tools, budget).
- Set the sprint start date.

Step 4: Update the Hybrid Accountability Chart

- Make permanent any HAC rows from the completed sprint that are staying.
- Remove or revise any that didn't work.
- Note which roles have shifted since last quarter.
- This becomes the new "Hybrid Org Today" baseline.

Pro Tip: This meeting replaces no existing meetings. If you run EOS, this layers onto your quarterly planning — Signal Backlog maps to rocks, HAC maps to accountability chart, sprint review maps to your quarterly review. Same cadence, new layer.

Action Step: Put the quarterly operating session on the calendar for the end of this quarter. Book 90 minutes. Invite the leadership team. Set the agenda using the four steps above.

Part 2: The Hybrid Org Today Document

This is the living document that captures where you actually are — not where you planned to be.

Template

```
HYBRID ORG TODAY — [Company Name] — [Quarter/Year]

ACTIVE SPRINT
  Constraint: [one sentence]
  Human Orchestrator: [name]
  Status: [Signal / Source / Design / Build / Deliver / Compound / Complete]

SIGNAL BACKLOG (ranked)
  1. [constraint] — est. cost: $X — last validated: [date]
  2. [constraint] — est. cost: $X — last validated: [date]
  3. [constraint] — est. cost: $X — last validated: [date]

HYBRID ACCOUNTABILITY CHART
  [Role/Function] | [Agent Team] | [Human Supervisor] | [Level]
  ...

COMPLETED SPRINTS
  Sprint 1: [constraint] → [outcome in one sentence] — [date]
  Sprint 2: [constraint] → [outcome in one sentence] — [date]

NEXT QUARTERLY REVIEW: [date]
```

Pro Tip: This document should fit on one page. If it doesn't, you're tracking too much. The Hybrid Org Today is a dashboard, not a filing cabinet.

Part 3: EOS/Scaling Up Integration

How the quarterly operating session maps to your existing operating system:

COMPOUND RHYTHM	EOS EQUIVALENT	SCALING UP EQUIVALENT
Signal Backlog	Issues List (strategic)	Priorities / Rocks candidates
Sprint commitment	Quarterly Rock	Quarterly Priority
Human Orchestrator	Rock owner	Priority owner
HAC update	Accountability Chart review	Function Accountability Chart
Quarterly operating session	Quarterly Planning	Quarterly Planning

The Compound Rhythm doesn't replace your operating system. It adds a layer specifically for AI-enabled workflow transformation. The sprint is a rock. The HAC is part of your accountability chart. The Signal Backlog is your strategic issues list, focused on operational constraints AI can address.

Pro Tip: If you run EOS and this feels like a second operating system, you're doing it wrong. The sprint is a rock. The quarterly operating session is a 30-minute addition to your quarterly planning. The HAC is a column on your accountability chart. Your operating system gains a new capability; it does not gain a competitor.

Part 4: The Compounding Scorecard

Track across quarters to see the compounding:

QUARTER	CONSTRAINT SOLVED	COST BEFORE	COST AFTER	DELTA	CUMULATIVE IMPACT
Q3 2026					
Q4 2026					
Q1 2027					
Q2 2027					

This is the evidence that the rhythm is working. Each sprint produces a delta. The deltas stack. After four sprints, the cumulative impact is the business case for continuing.

Action Step: Create the Compounding Scorecard. Fill in the first row with your current sprint. Tape it to the wall next to your accountability chart.

Populated Example: Ridgeline Media Group (40-Person Marketing Agency)

Ridgeline ran three sprints over three quarters. Here is their Hybrid Org Today document and Compounding Scorecard at the end of Q1 2027.

Hybrid Org Today

HYBRID ORG TODAY – Ridgeline Media Group – Q1 2027

ACTIVE SPRINT

Constraint: Proposal generation requires 12 hours of senior strategist time per prospect, limiting new business capacity to 4 proposals/week
Human Orchestrator: Dana Rios (VP Strategy)
Status: Design

SIGNAL BACKLOG (ranked)

1. Media buying reconciliation – est. cost: \$340K/yr – last validated: 2027-01-15
2. Freelancer onboarding and briefing – est. cost: \$185K/yr – last validated: 2027-01-15
3. Campaign performance alerting – est. cost: \$120K/yr – last validated: 2026-12-20

HYBRID ACCOUNTABILITY CHART

Client Onboarding Coordinator | Onboarding Agent Suite | Sarah Chen (Client Ops) | 3
Content Production Manager | Content Pipeline Agent | Marcus Webb (Creative Dir) | 2
Client Reporting Analyst | Reporting Agent Team | Priya Nair (Analytics Mgr) | 3

COMPLETED SPRINTS

Sprint 1: Client onboarding bottleneck → Onboarding reduced from 3 weeks to 5 days, saving \$984K/yr across 120 clients – Q3 2026
Sprint 2: Senior strategist time consumed by content production → 15 hrs/wk of strategist time freed, reallocated to new business – Q4 2026
Sprint 3: Analyst time consumed by client reporting → 8 hrs/wk of analyst time freed, reallocated to insight generation – Q1 2027

NEXT QUARTERLY REVIEW: 2027-04-14

Compounding Scorecard

QUARTER	CONSTRAINT SOLVED	COST BEFORE	COST AFTER	DELTA	CUMULATIVE IMPACT
Q3 2026	Client onboarding: 3 weeks per client	\$8,200/client x 120 clients = \$984K/yr	\$1,900/client x 120 clients = \$228K/yr	\$756K/yr	\$756K/yr
Q4 2026	Content production: senior strategist bottleneck	15 hrs/wk x \$150/hr = \$117K/yr	3 hrs/wk x \$150/hr = \$23.4K/yr	\$93.6K/yr	\$849.6K/yr
Q1 2027	Client reporting: manual analyst assembly	8 hrs/wk x \$85/hr = \$35.4K/yr	1 hr/wk x \$85/hr = \$4.4K/yr	\$31K/yr	\$880.6K/yr
Q2 2027					

Three sprints. Three quarters. \$880K in annualized cost reduction, with the freed capacity redirected to revenue-generating work. The first sprint produced the largest delta — that is normal. The compounding is in the cumulative column: each sprint builds on the operational foundation the previous sprints created.

Summary

The quarterly operating session is four steps: review the previous sprint, update the Signal Backlog, commit the next sprint, update the HAC. The Hybrid Org Today document captures the current state in a single page. The Compounding Scorecard tracks the evidence that the rhythm is producing results. Together, they turn isolated sprints into a sustained transformation cadence.

Handoff

You now have the meeting agenda and the living document. The quarterly operating session locks the rhythm. The Hybrid Org Today document keeps the leadership team aligned on what is actually true about your hybrid org right now. The Compounding Scorecard makes the business case visible.

The next chapter builds on what happens when the rhythm reveals patterns across sprints — when the backlog starts telling you something about your organization that no single sprint could show.
